Directions: Read the paragraph and find the mistakes. Draw a line through each error in the paragraph. Then write the correction above it.

In nature, water is always on the move. It makes a journey called the water cycle? The heat from the Sun warms the water. That makes it evaporate into the air. The tiny water droplets in the air form clouds. When the clouds get too heavy, water spills out of them. The water falls back down to earth as rain or snow.
